Oskar Allerslev Christiansen

Copenhagen, Denmark | Oskar.m1660@gmail.com | linkedin.com/in/oskarallerslev | github.com/OskarAllerslev

Education

University of Copenhagen — Copenhagen, Denmark
MSc in Actuarial Mathematics — *Sep. 2025 – Jun. 2027 (expected)*

- **Focus:** Advanced probability theory, quantitative risk management, ML, and computational finance.
- **Key Coursework:** Stochastic Processes, Measure Theory, Non-Life Insurance Math, C++ Programming.

University of Copenhagen — Copenhagen, Denmark
BSc in Actuarial Mathematics — *Sep. 2022 – Jun. 2025*

- **Bachelor Thesis:** Developed a hybrid insurance pricing framework for a competitive market simulation.
- **Actuarial Modules:** Modeled fire claim severity using **Extreme Value Theory (EVT)** and **Ensemble Regression**; estimated mortality intensities via **Generalized Linear Models (GLM)**.
- **Key Coursework:** Financial Econometrics (Cointegration, VECM), Machine Learning, Time Series.

Technical Skills

Languages: Java, C++, R (Advanced/Package Dev), SQL, Python, LaTeX
Tools & Frameworks: Git, Gradle, Azure DevOps, VS Code, Shiny, Tidyverse, CI/CD
Domain Expertise: Extreme Value Theory, GLM, Time Series, Quantitative Modeling, ETL Pipelines

Experience

Festina Finance — Copenhagen, Denmark
Actuarial Software Developer — *Jul. 2026 – Present*

- Engineered object-oriented financial architecture and core life insurance math algorithms in **Java**.
- Collaborated on software design patterns, implementation, and test-driven development for scale solutions.

PFA Pension — Copenhagen, Denmark
Student Actuary, Actuarial Department — *Nov. 2024 – Jun. 2026*

- **DevOps & Data Engineering:** Built ETL pipelines for Commercial Insurance Insights. Migrated legacy SQL workflows to **R-based environments** with CI/CD via **Azure DevOps**.
- **Automation & Analytics:** Automated client reporting using **R officer** and built interactive **Shiny** dashboards. Executed complex data transformations using SQL and dplyr/dbplyr for pricing models.

Again Bio — Copenhagen, Denmark
Finance Assistant — *Jan. 2024 – Jan. 2025*

- Constructed financial models and budget forecasts using renewal theory to predict operational costs.

Competitions

Nitor Energy Forecasting Competition 2026 — Copenhagen, Denmark
Team: Alfaerne Fra Aktuariatet — *Feb. 2026*

- Engineered a machine learning pipeline in **R** (**tidymodels**) to forecast volatile energy market prices.
- Created meteorological features and deployed market-tailored **XGBoost** models to optimize RMSE.

Projects

Lifepack (R Package) | *R, devtools, roxygen2, OOP* — *2024*

- Developed and documented an open-source R package for life insurance mathematics with full unit testing.

Algorithmic Optimization & Data Structures | *C++, Java* — *2024 – Present*

- Implemented low-level data structures and memory management routines to solve complex algorithmic tasks.
