

OSKAR ALLERSLEV CHRISTIANSEN

Copenhagen, Denmark | Oskar.m1660@gmail.com | [linkedin.com/in/oskarallerslev](https://www.linkedin.com/in/oskarallerslev) | github.com/OskarAllerslev

EDUCATION

University of Copenhagen

Copenhagen, Denmark

MSc in Actuarial Mathematics

Sep. 2024 – Present

- Focus: Advanced probability theory, quantitative risk management, ML, and financial econometrics.
- **Coursework:** Stochastic Processes, Measure Theory, Non-Life Insurance Mathematics.

University of Copenhagen

Copenhagen, Denmark

BSc in Actuarial Mathematics

Sep. 2021 – Jun. 2024

- **Bachelor Thesis:** Developed a hybrid insurance pricing framework for a competitive market simulation.
- **Non-Life Module:** Engineered a fire claim severity model utilizing **Extreme Value Theory (EVT)** and **Ensemble Regression** to capture tail risk.
- **Life Module:** Modeled mortality intensities using **Generalized Linear Models (GLM)**.
- **Relevant Coursework:** Financial Econometrics (Cointegration, VECM), Machine Learning (Gradient Boosting), Time Series Analysis.

EXPERIENCE

PFA Pension

Copenhagen, Denmark

Student Actuary, Actuarial Department

Nov. 2024 – Present

- **DevOps & Data Engineering:** Designed ETL pipelines for Commercial Insurance Insights. Migrated legacy SQL workflows to **R-based environments** with CI/CD via **Azure DevOps**.
- **Automation:** Automated client reporting using the **R officer** package, reducing manual slide generation time significantly.
- **Visualization:** Developed interactive **Shiny** dashboards to present financial metrics to stakeholders.
- **Analysis:** Executed complex data transformations using SQL and dplyr/dbplyr to support pricing models.

Again Bio

Copenhagen, Denmark

Finance Assistant

Jan. 2024 – Jan. 2025

- Constructed financial models and budget forecasts using renewal theory to predict operational costs.
- Optimized bookkeeping processes and provided data-driven support for strategic financial decisions.

COMPETITIONS

Nitor Energy Forecasting Competition 2026

Copenhagen, Denmark

Team: Alfaerne Fra Aktuariatet

Feb. 2026

- Developed a predictive machine learning pipeline using **R** and **tidymodels** to forecast highly volatile energy prices across six distinct markets, optimizing for RMSE.
- Engineered domain-specific meteorological features and optimized computational efficiency by deploying specialized **XGBoost** models for individual market micro-structures.

PROJECTS

Lifepack (R Package) | R, devtools, roxygen2, OOP

2024

- Developed a comprehensive R package for life insurance mathematics implementing unit testing.
- Documented full functionality to ensure reproducibility for academic and practical use.

Financial Time Series Analysis | R, FinMetrics

2024

- Conducted Johansen Cointegration tests to identify equilibrium relationships between asset classes.
- Validated model assumptions through rigorous hypothesis testing for unit roots and stationarity.

Algorithmic Optimization | C++, Data Structures

2024 – Present

- Honed my understanding of more strongly typed languages by doing leetcode problems and reading material on memory management.

TECHNICAL SKILLS

Languages: R (Advanced/Package Dev), SQL, Python, C++, LaTeX

Tools: Git, Azure DevOps, VS Code, Shiny, Tidyverse

Actuarial & Math: Extreme Value Theory, GLM, Time Series (Cointegration), Machine Learning, ETL
